Section 5. Terms of Reference

Objective of the engagement

The objective of this study is to explore the possibility of harnessing solar energy to address marine transportation challenges, promote sustainable development, and mitigate environmental impacts in island communities. This assessment aims to analyse various factors such as demand, regulatory environment, technological feasibility, economic viability, and environmental impact. Additionally, it seeks to identify potential stakeholders, assess existing infrastructure, and explore funding mechanisms for the implementation of solar ferry projects. Ultimately, the goal is to gather comprehensive insights that can aid decision-making processes and pave the way for the successful integration of sustainable transportation solutions in Pacific island countries such as Fiji, contributing to economic development, environmental conservation, and long-term resilience.

Background

In 2022 international shipping accounted for about 2% of global energy-related CO₂ emissions. While the revised emissions reduction targets recently announced by the International Maritime Organization (IMO) are now in line with the goals set out in the Paris Agreement, legally binding measures for the implementation of the revised strategy will be needed to steer the maritime shipping sector onto a trajectory consistent with the Net Zero Emissions by 2050 (NZE) Scenario, which requires an almost 15% reduction in emissions from 2022 to 2030. Technological innovation, supportive policies and collaboration across the value chain are needed to drive the adoption of low- and zero-emission fuels and technologies for oceangoing vessels.

With delicate ecosystems and the spectre of climate change looming, a shift toward sustainable transportation is not just an environmental necessity but a strategic imperative. To address these challenges, island countries are exploring various options. Land-based transportation solutions include the promotion of electric vehicles (EVs), the development of cycling infrastructure, and the enhancement of public transit systems. EVs offer a promising avenue, with advancements in battery technology improving their efficiency and range.

When it comes to maritime transportation, the shift from conventional diesel-operated ferries to solar-powered ones stands out as a compelling solution. This transition aligns with global efforts to reduce carbon emissions and can significantly contribute to mitigating the environmental impact of transportation in island nations. Solar ferries, leveraging the abundant sunlight in these regions, provide a sustainable alternative, emitting fewer pollutants and reducing reliance on finite fossil fuels.

Fiji is a small island developing state (SIDS) located in the heart of the Pacific Ocean. Its total land area, composed of 332 islands, totals 18 274 km². This land area compares to over 1290 000 km² of national waters, which represent Exclusive Economic Zones (EEZs). Fiji's economy, driven by tourism, agriculture, and fisheries, would benefit significantly from the introduction of solar-powered ferries. This shift would reduce costs in the maritime sector, primarily through lower fuel consumption and maintenance expenses. The tourism industry, pivotal to Fiji's economy, stands to gain from a cleaner and more sustainable transportation option, attracting eco-conscious travellers and potentially boosting tourist numbers. This initiative not only addresses environmental concerns associated with traditional maritime transportation but also aligns with Fiji's commitment to sustainable development.

Fiji's National Climate Change Policy identifies the transport sector as Fiji's largest fuel consumer, and the updated Nationally Determined Contribution (NDC) sets a target to reduce domestic maritime emissions

by 40%. Conducting a thorough assessment for solar ferry deployment in Fiji marks a crucial step towards investigating the viability of integrating solar-powered ferry systems within the island nation. With the International Solar Alliance (ISA) actively involved in similar projects across its member countries, its support to Fiji in meeting its National Determined Contributions (NDC) targets is instrumental. Through the implementation of solar ferries, backed by collaborative efforts from ISA, Fiji can establish itself as a trailblazer in sustainable transportation within the Pacific region.

About ISA Programme (Scaling Solar E-Mobility and storage)

The ISA's 'Scaling Solar E-Mobility & Storage' program aims to foster an ecosystem conducive to widespread adoption of energy storage systems and the increased integration of solar energy in the E-mobility sector across ISA member countries. With focus on two primary solutions—Vehicle Integrated Photovoltaic (VIPV) technology and solar-powered vehicle charging stations—the initiative seeks to outfit various vehicles, including motorbikes, passenger and cargo three-wheelers, four-wheelers, buses, trucks, and boats, with solar panels.

Scope of Work:

- Identification and comparison between Traditional and Solar based marine transportation technologies segment wise (*public transport, tourism, fisheries and Cargo*) in the country.
- Study of country specific policies on solar ferries and review energy based marine transport. Evaluate the feasibility and potential of deploying solar solutions in marine transportation, focusing on ferry services in Pacific Island countries.
- Identify key stakeholders, including government agencies, private sector entities, community organizations, and potential investors in the field of marine transport in the region. Engage with stakeholders through consultations, workshops, and interviews to gather input and build support for solar ferry initiatives.
- Assess the techno-commercial viability of solar-powered ferry operation, considering factors such as geographical location, weather conditions and climatic extremes, ferry routes, passenger capacity, cargo requirements, and health and safety considerations.
- Identify and evaluate various solar ferry technologies (including hybrid solutions) suitable for ferry design, considering factors such as technical specifications, duty hours, energy efficiency, and scalability.
- Research and document the applicable international marine standards and certifications including regulatory requirements, other standards & certifications necessary for deploying solar-powered ferries in Fiji and Pacific Island Countries.
- Compilation of updated data on the wave climate of Fiji and other Pacific Islands.
- Conduct a comparative analysis of policies, incentives, and initiatives supporting the adoption of solar-powered marine transportation in Pacific Island Countries.
- Perform technoeconomic assessments to estimate the costs associated with implementing solar ferry projects in different segments for Fiji.
- To develop viable business models aligned with proposed segment wise solutions. Conduct life cycle cost analysis and cost-benefit analysis to evaluate the economic feasibility and long-term

sustainability of solar ferry operations, including investments in Operation and Maintenance practices for Fiji.

- Research and compile a list of key vendors, manufacturers, and suppliers of complete solar ferry solution in addition to solar propulsion systems, energy storage solutions, and other relevant components for solar ferries.
- Review the existing - Ferries in Pacific Island Countries and capture learnings, best practices and reasons for successes or failures of previously implemented solar/renewable energy based ferries including method of implementation, timeframe, business model adopted, performance trajectory, techno-commercial aspects, and socio-economic impact of project.
- Review the existing Supply chain for Solar ferry including the manufacturing capacities of different parts of the Solar ferry system.
- Workout cost-estimation of complete solar ferry solution and various sub-system backed by authentic supporting documents.
- Draft tender documents which include Scope of Work, Segment wise and capacity wise detailed technical specifications, Deliverable and timelines for procurement of solar ferry.
- The selected bidder shall also assist ISA in arranging training programme & workshops during country missions in country.
- Any other relevant areas requested by the member country or ISA.
